PROFILE

AI Engineer with a BS in Artificial Intelligence with (CGPA 3.42/4.00) and hands-on experience designing, training, and deploying end-to-end intelligent systems. Efficient in LLMs (RAG) and full stack software development, highlighted by building and publicly hosting a production ready bilingual legal assistance platform that delivers real time response times. Proficient across the complete software and intelligence lifecycle from custom vision model development to scalable web API deployment and automated delivery. Seeking AI/ML Engineer, Intelligent Systems Developer, or Associate Software Engineer roles to drive innovation and build high performance software solutions.

SKILLS

Python TensorFlow RAG LLMS Machine Learning Scikit-Learn Computer Vision NLP NumPy Pandas FastAPI MySQL LangChain Pinecone Git Prompt Engineering

EXPERIENCE

Computer Operator

Citizen Police Liaison Committee (CPLC), Shaheed Benazirabad **Jan 2022 - May 2022**

- Managed and maintained computer systems and organizational databases, ensuring data integrity and system reliability.
- Supported data entry, verification, and reporting workflows across departments.
- Troubleshot software and hardware issues, minimizing downtime and improving team efficiency.

PROJECTS

Pakistan Legal Advisor: Built a multilingual (Urdu & English) legal assistant on a RAG pipeline that ingests legal PDFs, splits them into chunks, and blends FAISS dense retrieval with BM25 sparse search before re-ranking results with a cross-encoder delivering cited answers in under two seconds on Hugging Face Spaces **(repo).**

Naz Poultry Manager | Poultry Farm Management System (Repo)
Developed a software solution to streamline poultry farm operations, digitize manual record-keeping, and simplify the management of daily farm activities, improving operational efficiency and data organization.

Digit Recognition System: Trained a CNN on the MNIST dataset in Google Colab, with a custom preprocessing pipeline (grayscale conversion, resizing, contrast enhancement) that extends prediction beyond the MNIST test set to real, user-uploaded handwritten digit photos **(Repo).**

AI-Powered Trading Bot: Built an automated signal generator that reads real-time candlestick charts using OpenCV edge and contour detection to catch structure breaks, volume spikes, and retest zones, producing buy/sell signals that held 62% accuracy across six months of backtesting.

Face Recognition System: Built a face recognition pipeline using InsightFace (SCRFD detection + ArcFace embeddings) with cosine-similarity matching against a registered face gallery, plus live webcam capture and a motion-based liveness check to flag static-photo spoofing attempts **(Repo)**

EDUCATION

BS Artificial Intelligence **Aug 2022 - Aug 2026**

Quaid-e-Awam University of Engineering, Science and Technology
CGPA: 3.42/4.00

LANGUAGES

English: Advanced working proficiency | **Urdu:** Native speaker
